

COME TO LEIPZIG!

Leipzig is Germany's most dynamic and fastest growing major city in many years. The vibrant city stands for change like no other European city. Just 30 years ago, the city was characterised by open-cast coal mines, desolate industries, and disastrous infrastructure and traffic routes.

Leipzig is crisscrossed by a green belt, open-cast mines have become lakescapes, the city and region rely on sustainability and state-of-the-art transportation solutions, and are growing in an economically and demographically sustainable way. A comprehensive and safe network of cycling lanes is being expanded step by step, creating safe routes for everyday use. The design of our future mobility system and the fair distribution of public space are the central policy fields for the sustainable development of our society.

Leipzig's history is the history of change. This change can be achieved every day - by everyone.

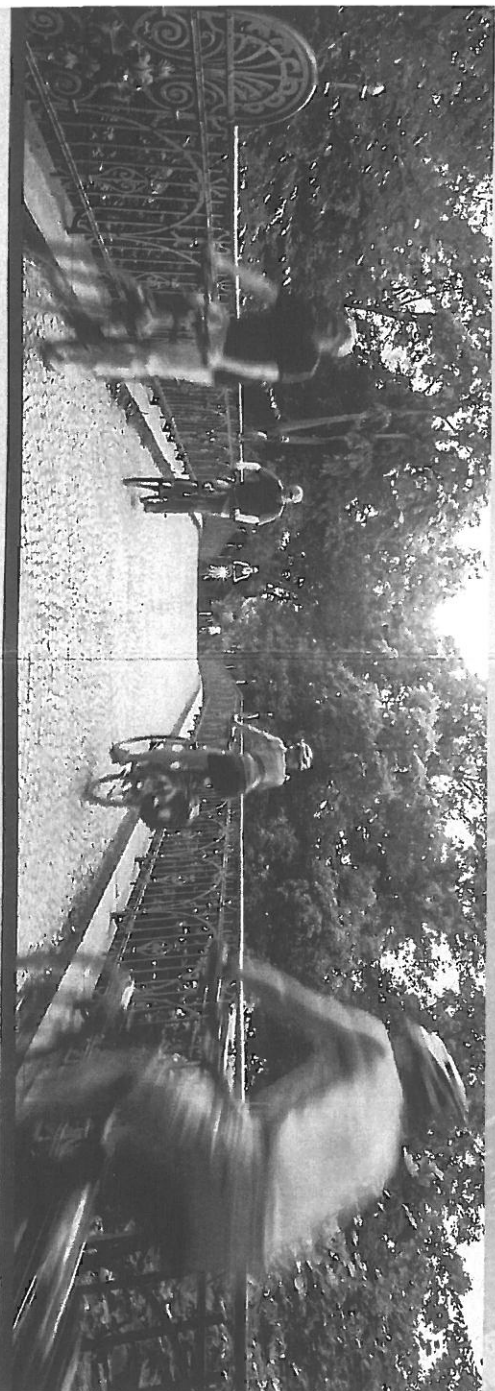

Leipzig-city 2023 in Leipzig will show what is possible when we shape the future with courage and energy.

0-CITY 2023

-12 May 2023, the city of Leipzig will host Velo-city 2023, jointly organized by the city of Leipzig, the European Cyclists' Federation (ECF) and Leipziger Messe. Join us for an unforgettable conference experience under the main theme **Leading the Transition**.

Velo-city, the world cycling summit, is where advocates, researchers and industry meet to shape the future of cycling. As the annual event of the European Cyclists' Federation, Velo-city is a valuable part in promoting cycling as a sustainable mobility means of transport for all. Like no other event, Velo-city offers a knowledge-exchange and policy-platform to the growing number of more than 1400 cyclists from over 60 countries involved in the policy, planning and provision for cycling, active mobility and sustainable urban development. Moreover, the conference also showcases the latest innovations for a better experience in cities and beyond!

KEY FIGURES

LEADING THE TRANSITION

The design of our future mobility systems and the fair allocation of public space are crucial for the sustainable development of our societies. People-centred and climate-friendly mobility systems are being implemented all over the world, but many influential stakeholders resist and challenge any attempts to give back space to people at the expense of private cars.

Now is the time to push the transition in the right direction and take the necessary steps for a more equitable and sustainable planet, one that is able to cater for the needs of generations yet to be born.

The bicycle is a simple solution to the world's most complicated problems. We need breakthrough decisions for strong policies and planning practices, a fair redefinition of public space, trusting collaboration amongst all stakeholders, integrated future mobility systems and green economic prosperity.

Let's lead this transition together!
